

CS 481

HOMEWORK 2

BAKER, ALEX

3.1

Output: PARENT: value = 5

Even though the child change the value of value, it only got a copy of the value and did not change the value in the parent

3.2

Number of process: 4

3.5

The only state that is shared are the shared memory segments. The stack and head are copied to the child but now shared.
